

Curriculate Task Catalog for Educators and Presenters

Date: December 25, 2025

This catalog provides a comprehensive overview of all Curriculate task types available for station-based learning. Each task is designed for 1–4 players, fully AI-generated (no teacher setup required), and incorporates gamified elements such as timers, points, animations, and sound effects. Tasks promote engagement through collaboration, competition, and real-world application while aligning with Bloom's Taxonomy. Average play times are estimated for a group of 4 players.

Tasks are organized by primary category.

Physical Tasks

Tasks that get students moving to energize learning (Bloom's: Applying, Creating).

Body Break

The device displays a short, guided physical routine such as stretches, jumping jacks, quick dances, or fun poses, accompanied by upbeat music, animated characters, and motivational prompts. Students follow along together for 30–60 seconds, with a progress bar and celebratory confetti at the end. This non-scored energizer serves as a quick reset to re-engage body and mind.

Benefits: Boosts blood flow and attention, reduces restlessness, regulates classroom energy, and supports brain–body connection for better learning readiness.

Average time: 1–2 minutes.

Motion Mission

Students complete device-detected physical challenges like jumping a set number of times, balancing for a duration, or performing specific movements tied to content (e.g., acting out erosion). Real-time motion tracking provides immediate feedback, scoring, power-ups, and animated celebrations upon success. Customizable missions keep the activity fresh and linked to learning objectives.

Benefits: Reinforces kinesthetic learning, embodies abstract concepts through movement, and delivers instant success feedback that motivates continued effort.

Average time: 5–7 minutes.

Musical Chairs

A digital version of the classic game where music plays and students move around the station area; when the music stops, they freeze or rush to designated spots. Freeze moments can optionally trigger quick recall questions or facts displayed on screen, adding a content twist to the energizer. Dramatic animations and sound effects heighten the excitement across multiple rounds.

Benefits: Develops self-control, quick response to cues, rule-following, and attention management while providing joyful group movement.

Average time: 8 minutes.

Make and Snap

Teams receive a creative prompt to physically build, arrange, pose, or create something in the real world (e.g., a model representing a concept or a human diagram). They then take a photo of their creation using the device and submit it for review. AI scoring evaluates alignment with the prompt, rewarding originality and accuracy.

Benefits: Encourages tangible application of knowledge, hands-on creativity, collaboration, and authentic demonstration of understanding beyond the screen.

Average time: 10 minutes.

Pet Feeding

A virtual pet responds to physical device actions—shaking to feed, tilting to play, or other motions—that students perform to care for it. The pet's health meter, growth stages, and cute animations reflect the quality of care provided over the task duration. Success in pet care ties to content mastery or task completion.

Benefits: Teaches cause-and-effect, responsibility, systems thinking, and sustained engagement through adorable reactive feedback.

Average time: 6 minutes.

Hide & Seek

Students receive a clue or page/location reference related to classroom materials or resources, then physically search the room to find it. Once located, they snap a photo as proof and write a short explanation of its significance. AI scoring assesses both the photo evidence and the written explanation.

Benefits: Promotes active exploration, source literacy, spatial awareness, and deeper contextual connections to subject matter.

Average time: 10 minutes.

Physical Mystery Clues

Throughout a task set, certain tasks briefly flash a small set of emoji clue cards (8-second display) that students must memorize. These clues accumulate across multiple tasks without warning. The final task presents a large grid of emojis, requiring exact recall of all previously shown clues to earn a substantial bonus.

Benefits: Builds working memory, rewards sustained attention across the entire activity, creates anticipation, and adds game-show excitement.

Average time: Integrated (final recall ~2 minutes).

Competitive Tasks

High-energy races and rivalries (Bloom's: Remembering, Applying).

Flashcards Race

AI-generated flashcards appear one at a time with a countdown timer; teams race to buzz in and answer correctly using a tap mechanic. The fastest correct responder wins the card, earning points with possible streak bonuses and live leaderboard updates. Honest self-reporting or optional voice recognition handles verification in this high-speed review.

Benefits: Develops rapid retrieval, automaticity of core facts, and healthy rivalry that cements knowledge through immediate feedback.

Average time: 5–7 minutes.

Mad Dash Sequence

A sequence of 3–4 colored stations (or academic steps linked to colors) is revealed; teams must physically scan the stations in the exact correct order as quickly as possible. Timing and accuracy determine scoring, with harder levels requiring conceptual understanding rather than simple colors. Animated finish-line celebrations reward the fastest correct team.

Benefits: Reinforces procedural and sequential knowledge through physical action, encourages teamwork in planning the route, and adds thrilling competition.

Average time: 7 minutes.

Brain Blitz

In a Jeopardy-style reverse format, an answer (word, phrase, or fact) appears and teams race to provide the correct question form aloud or via input. The fastest accurate response scores points amid escalating intensity, buzzer sounds, and dramatic reveals. Content is carefully generated to allow clear correct phrasing.

Benefits: Strengthens retrieval practice while requiring precision in academic language formulation and reformulation of knowledge.

Average time: 6 minutes.

True/False Tic-Tac-Toe

A tic-tac-toe grid is displayed alongside a series of true/false statements; players are assigned True or False roles and claim squares only by correctly judging statements. Intra-team rounds ensure everyone participates, with multiple statement sets generated as needed. Mistaken judgments benefit the opponent, adding strategy.

Benefits: Combines fact evaluation with tactical thinking, provides motivating repetition, and reinforces accuracy under game pressure.

Average time: 8 minutes.

Guess Who

One randomly selected leader privately views a secret subject-related concept while teammates ask only yes/no questions to deduce it. A hold-to-reveal button, question counter, and 60-second timer after first view increase pressure. Quick correct guesses earn higher points for the team.

Benefits: Builds logical elimination, strategic questioning skills, collaborative reasoning, and category/vocabulary thinking.

Average time: 7 minutes.

Hangman Duel

Teams take strict turns dragging letter tiles into blanks for a mystery word, with correct letters locking in and wrong guesses building a playful themed figure (snowman, tree, gingerbread). Power-up cards, full-word guess risks, and festive animations add strategy and excitement. Multiple rounds use different AI-generated words.

Benefits: Enhances spelling, vocabulary, pattern recognition, and strategic risk-taking in a highly engaging, time-pressured format.

Average time: 8 minutes.

Word Weaver

Players receive a set of content-related words and take turns placing them on a rotatable grid in a Scrabble-style layout, earning points for connections and valid placements. Turn rotation is enforced, and grid rotation allows creative orientations. AI validates word placement and calculates scores.

Benefits: Promotes vocabulary building, awareness of phrase structure and syntax, and cooperative-competitive wordplay.

Average time: 8 minutes.

Photo Tasks

Visual creation and documentation (Bloom's: Creating).

Photo

Students respond to a prompt by taking a single photograph that provides evidence of understanding—such as a posed scene, real-world example, worked math problem, or lab setup. The device camera integrates seamlessly for instant capture and submission. AI evaluates relevance and quality against the prompt.

Benefits: Connects learning to authentic real-world evidence, develops observation skills, and encourages creative demonstration of concepts.

Average time: 5 minutes.

Photo Journal

Teams create a short sequence of photographs that together tell a story, document a process, or illustrate a concept progression, adding captions or reflections to each image. The series is compiled into a slideshow for review upon submission. AI scoring considers both visual evidence and written explanations.

Benefits: Builds visual narrative skills, supports metacognition through reflection, and deepens explanation quality beyond single images.

Average time: 8 minutes.

Text Tasks

Written responses for reflection (Bloom's: Understanding, Applying).

Physical Multiple Choice

A standard multiple-choice question appears on screen with fully visible options, but each option is randomly assigned a color corresponding to one of the classroom's permanent colored QR stations. Students must physically walk to and scan the correct colored station to submit their choice, repeating for 3–5 questions. Random color mapping ensures movement every time.

Benefits: Combines familiar multiple-choice assessment with mandatory kinesthetic activity, preventing position-based guessing and increasing energy.

Average time: 4–6 minutes.

Open Text

Students type a longer free-form response to an open-ended prompt, with medium and hard difficulties enforcing minimum length requirements (scaled by grade level). A spacious text editor supports formatting. AI scoring uses a rubric evaluating clarity, accuracy, reasoning, and evidence.

Benefits: Develops written articulation of complex ideas, encourages deeper reasoning, and allows nuanced assessment of understanding.

Average time: 5–7 minutes.

Short Answer

A focused prompt requires a brief word, phrase, or single-sentence response that matches an expected answer or acceptable variants. Objective scoring is supplemented by AI to award partial credit for close matches and filter nonsense. Quick and straightforward input keeps momentum high.

Benefits: Provides precise recall checks, efficient formative assessment, and clear feedback without multiple-choice guessing cues.

Average time: 3 minutes.

True/False

Students judge carefully crafted statements as true or false, receiving immediate feedback and a concise explanation reveal. Statements are designed to be tricky yet fair to promote thoughtful discernment. Simple tap interface makes it fast and low-pressure.

Benefits: Rapidly identifies misconceptions, sharpens conceptual clarity, and offers efficient review of key facts.

Average time: 3 minutes.

Synthesis Tasks

Explain/combine ideas (Bloom's: Analyzing, Creating, Evaluating).

Narration Synthesize

Each player receives a unique AI-generated concept or process to explain aloud to the group in turn, with strict rotation and an optional 60-second timer. Players tap when finished narrating to advance. Completion of all turns earns a team bonus, with faster rounds scoring higher.

Benefits: Solidifies understanding through verbal teaching-back, promotes active listening, and deepens retention via synthesis and articulation.

Average time: 10 minutes.

AI Debate Judge

Teams are paired and assigned sides/roles for a structured debate on an AI-selected topic, with timed speaking turns for introductions, arguments, rebuttals, and conclusions. Recording indicators and timers guide delivery. At the end, AI provides detailed scoring, constructive feedback, and declares a winner.

Benefits: Builds argumentation skills, evidence use, respectful discourse, critical thinking, and oral confidence with impartial AI judgment.

Average time: 10–12 minutes.

Brain Spark Notes

A model note-taking template appears on screen; students recreate concise, structured notes (title + 3–5 key points with definitions) on paper, then photograph their work for submission. AI evaluates completeness, clarity, and accuracy.

Benefits: Teaches summarization, distillation of main ideas, and effective study skill development through active processing.

Average time: 7 minutes.

Mind Mapper

The device displays a graphic organizer template (e.g., mind map, concept web) with a central topic and suggested branches; students recreate and fill it on paper, adding their own connections on harder levels. Completed organizers are photographed and submitted for AI scoring.

Benefits: Fosters systems thinking, visual organization of complex ideas, and synthesis of relationships among concepts.

Average time: 10 minutes.

Role Play

Players draw AI-generated role cards containing a name, role, and morally appropriate traits, choosing mystery (hidden) or classic (open) mode. Once roles are assigned, a subject-related scenario appears, and the team freely role-plays it. Turn-based drawing adds anticipation.

Benefits: Cultivates empathy, perspective-taking, oral communication, and real-world application of content through embodied scenarios.

Average time: 12 minutes.

Script Play

An AI-generated script tied to the subject appears, showing each speaker's lines, stage directions, tone cues, and surrounding context for smooth reading. Players pass the device and perform

sequentially, earning bonus points for expressive dramatization. Settings and character traits are customizable upfront.

Benefits: Enhances reading fluency, comprehension through performance, collaborative narrative reasoning, and deeper retention.

Average time: 10 minutes.

Recall Tasks

Memory retrieval (Bloom's: Remembering).

Echo Chain

The AI starts with a subject-related term; each player in turn repeats the entire growing chain aloud and adds one related term. Optional per-turn timer adds pressure. Full rotation without error earns a large team bonus, while breaks create humorous moments.

Benefits: Strengthens sequential recall, working memory, listening accuracy, and vocabulary association networks in a joyful group setting.

Average time: 6 minutes.

Flashcards

Classic self-paced flashcards present question and answer sides with flip animation and spaced repetition guidance. Students shout or discuss answers collaboratively. Progress tracking encourages mastery without competition pressure.

Benefits: Supports low-stress fact review, strengthens memory traces, and builds confidence through repeated retrieval.

Average time: 5 minutes.

Sequence

Students drag 4–8 items (steps, events, life cycle stages) into the correct logical or chronological order on screen. Animated feedback confirms placements. Objective scoring provides clear results.

Benefits: Develops understanding of procedures, cause-and-effect relationships, and overall structure of processes.

Average time: 4 minutes.

Timeline

Events are dragged onto a horizontal timeline marked with era labels or years for precise placement. Objective scoring rewards accurate chronology. Visual layout emphasizes historical or procedural flow.

Benefits: Promotes historical thinking, understanding of causal sequences over time, and big-picture perspective.

Average time: 5 minutes.

Matching

Two columns of 5–7 items each (terms and definitions, causes and effects) are connected by drawing animated lines. Correct pairings trigger satisfying visual and sound feedback. Objective scoring maps connections.

Benefits: Strengthens associations, reduces cognitive load through visualization, and offers quick formative insight.

Average time: 5 minutes.

Sort

Students drag 6–10 items into 2–4 labeled category buckets, receiving immediate visual feedback on placement. Objective scoring identifies correct categorizations. Simple yet powerful organization mechanic.

Benefits: Sharpens classification skills, clarifies concept boundaries, and rapidly reveals misconceptions.

Average time: 5 minutes.

Bluffing & Deduction Tasks

Deception and logic (Bloom's: Analyzing, Evaluating).

Fake Out

One player reads aloud a factual statement followed by three sophisticated variations (one correct, two clever fakes) plus one obviously hilarious option. Listening teammates vote via intuitive cards; points award correct identification and successful fooling. Reveal sparks lively discussion.

Benefits: Enhances oral fluency, listening comprehension, precise meaning discernment, and vocabulary depth through engaging deception.

Average time: 6 minutes.

Diff Detective

Two similar items (passages, lists, images, diagrams) are displayed side-by-side; students identify and list all differences for submission. Modes support text, visual, or multimodal comparison. Scoring can be objective or AI-assisted.

Benefits: Builds close reading/observation, attention to detail, comparison skills, and error detection useful across subjects.

Average time: 6 minutes.

Venn Sort

Items are dragged into overlapping zones of a 2- or 3-circle Venn diagram displayed prominently for easy manipulation. Partial credit awards correct category placements, with full points for items belonging to multiple zones. Large circles aid visibility.

Benefits: Develops nuanced classification, understanding of intersections and relationships, and higher-order relational reasoning.

Average time: 7 minutes.

Collaboration Tasks

Group creation (Bloom's: Creating).

Brainstorm Battle

A shared prompt appears and teams rapidly shout ideas aloud in a fast-paced divergent thinking session, with optional quick voting or ranking to highlight top contributions. No single correct answer encourages creativity. Real-time canvas optionally captures entries.

Benefits: Activates prior knowledge, promotes verbal participation, respectful collaboration, and lowers fear of incorrect responses.

Average time: 10 minutes.

Collaboration

Each team writes an initial response to a prompt, then views another randomly paired team's response and must thoughtfully reply—agreeing, disagreeing, adding evidence, or building further. AI scores both original quality and response depth, awarding bonuses accordingly.

Benefits: Fosters accountable written talk, perspective-taking, synthesis, peer feedback, and deeper reasoning than individual work.

Average time: 8–10 minutes.

Live Debate

Multiple teams select or are assigned debate topics, then pair for structured timed turns covering introductions, arguments, rebuttals, and conclusions. AI handles topic generation, pairing, role assignment, and final scoring with summary feedback. Penalties apply for timing violations.

Benefits: Strengthens argumentation, evidence-based reasoning, respectful discourse, and oral confidence in a competitive yet collaborative format.

Average time: 10–12 minutes.

Listening/Speaking Tasks

Oral communication (Bloom's: Applying).

Record Audio

Students record an oral response, explanation, or reading directly into the device, with options to re-record for best effort. Submissions are typically teacher-reviewed rather than AI-scored to capture nuance. Simple playback supports self-assessment.

Benefits: Builds oral fluency, confidence for verbal learners, and provides evidence of understanding through spoken expression.

Average time: 5 minutes.

Pronunciation

Prompted words or phrases are spoken aloud; AI analyzes pronunciation and delivers immediate feedback with accuracy scoring and optional accent comparison. Repeated practice loops encourage improvement.

Benefits: Improves phonetic accuracy, language acquisition confidence, and measurable speaking progress across sessions.

Average time: 6 minutes.

Speech Recognition

Students speak a full answer to an open prompt within a timed window; AI transcribes in real-time and scores based on conveyed meaning and accuracy. A start button and visible listening indicator guide delivery.

Benefits: Offers accessible oral response option, builds impromptu speaking skills, and supports language development.

Average time: 5 minutes.

Drawing/Creative Tasks

Artistic creation (Bloom's: Creating).

Draw Mime

A concept prompt appears; the team chooses to either draw it (on device or paper) or act it charades-style while teammates guess. Buttons track who guesses correctly and how quickly. Bonus points reward faster successes and creative representations.

Benefits: Encourages multi-modal concept encoding, reveals misconceptions through guessing, and promotes collaborative creativity.

Average time: 6 minutes.

Speed Draw

One player rapidly draws a prompted concept while teammates guess as fast as possible within a countdown timer. Classic Pictionary mechanics with animated tools and reveal celebrations. Points award quickest correct guesses.

Benefits: Reinforces rapid visualization of ideas, vocabulary through images, and engaging retrieval alternative to text.

Average time: 5 minutes.

Waiting & Mini-Game Tasks

Treasure Runner

During transition waits (e.g., after mood check-in or between tasks), an endless runner mini-game activates where players tap to jump, collect treasures, and earn bonus points. Power-ups and obstacles keep it lively until the next task arrives.

Benefits: Maintains positive momentum, reduces off-task behavior during delays, and provides light reflex practice.

Average time: Variable (waiting periods).

Feedback & Meta Tasks

Reflection (Bloom's: Evaluating).

Mood Checkin

At the start of a task set, each player selects a mood emoji and the team optionally adds a shared comment about excitement or energy level. Quick, non-scored input with cheerful confetti acknowledgment sets a positive tone.

Benefits: Supports classroom emotional climate, builds awareness of feelings, and gives teachers insight into group readiness.

Average time: 3 minutes.

Multi-Player Feedback

As a closing activity, each player rates the task set with emoji faces while the team can add an optional comment, suggestion, or statement of what was learned for bonus points. Simple interface encourages honest reflection.

Benefits: Provides valuable student voice, promotes metacognitive reflection, and creates a feedback loop for continuous improvement.

Average time: 5 minutes.

This catalog represents the complete set of Curriculate task types supported by the platform as of December 2025. All tasks are fully AI-generated and require no teacher preparation beyond selecting or uploading a task set.
