

PULSE GRADING

AI grading for teachers. Photograph, paste, or batch-upload a whole class PDF; pick a rubric; get scored feedback in seconds. Handles handwritten work, video and audio performance, and exports to Edsby.

CURRICULATE LIVE SESSIONS

AI-generated in-classroom scavenger hunts. Teachers describe a topic; Curriculate builds a live team game with 30+ task types. Kids play on any device while the teacher runs a GameMaster projector dashboard.

THE PROBLEM

Teachers grade nights and weekends. A single class set can eat 2–4 hours; the feedback loop for students stretches to a week.

Lecture-mode loses students fast. Traditional whole-class instruction disengages most kids within 15 minutes.

EdTech is fragmented. Teachers stitch together six tools that don't talk to each other — nothing bridges assessment and active learning.

THE SOLUTION — ONE PLATFORM, TWO WORKFLOWS

Pulse Grading turns 3 hours of grading into 20 minutes with rubric-matched AI feedback teachers can trust.

Live Sessions turn any lesson into a 30-minute team game — 30+ interactive task types spanning all six Bloom's levels.

Shared class roster means grades from Live Sessions flow directly into per-student progress reports for parents.

BLOOM'S LEVELS

- Both products in production with paying subscribers · Stripe billing live
- Native mobile apps published on Google Play and the Apple App Store
- Active teacher beta program driving weekly feature iteration
- Standards-aligned to the Ontario curriculum; framework-extensible to other jurisdictions

TECHNOLOGY & MOAT

- **Proprietary AI pipelines** — task generation, rubric matching, grading, and a 5-layer content-safety moderation stack
- **Multi-device architecture** — phones, Chromebooks, tablets, and hidden-QR laptop mode all coexist in one session
- **Full stack** — Next.js web · React (Vite) teacher and student apps · Node/Express + Socket.IO backend · MongoDB · Capacitor 6 mobile · OpenAI

IP position: Pending US patent application (filed under micro entity status). Registered Canadian trademark. Copyright in ~250K lines of proprietary source across web, mobile, and backend. Trade-secret AI prompt engineering and rubric-matching pipelines.

What we're looking for from Innovation Factory: warm intros to Hamilton-area school boards and independent schools for pilots · guidance on non-dilutive funding fit (IRAP, OCI, Mitacs) · advisory on the Canadian K–12 procurement cycle.
